

IT TELEPHONY *is here*

IS IT TIME TO TAKE YOUR BUSINESS
TO THE NEXT LEVEL?

*Simplify administration, lower costs and improve business processes.
The next generation of phone systems for small to medium sized companies.*

The telephone system is the next killer app

The first, low-cost, all-in-one IP-PBX and SIP unified communications productivity software for Microsoft® Windows™ platforms, Objectworld's Unified Communications Server™ puts you in control of telephony. UC Server simplifies administration seamlessly in real-time with Microsoft® Active Directory™, lowers total cost of ownership and enhances productivity by linking business communications with business processes.

The days of separate administration for users of your PBX, voice-mail, fax server and mail server are over.

UC Server administration is integrated with Active Directory™ and managed from either an Active Directory™ MMC snap-in or Objectworld UC Client™. UC Server allows IT staff to manage unified communications services using the same user accounts and security policies used in your Windows® environment, automatically, without any programming or special integration. Adds, moves, and changes become easy, and security policies become universal throughout the company. With single user login, users will never have to log into multiple communication systems.

Unified messaging is the fastest growing way to manage your email, voicemail, and faxes quickly and effectively using MS Outlook or any other email client. Manage and retrieve voice, fax and email messages from your email client, UC client or any telephone. The built in fax server provides advanced features. The speech engine provides text to speech conversion enabling you to have the system read you your emails over the phone or have enable interactive voice response (IVR) from your auto attendants IVR software applications or personal assistants.

Provides the simple tools that system administrators and users need to manage their personal communications environment including industry-leading unified messaging, auto-attendants and personal call control. Objectworld Assistants provide unprecedented accessibility for employees to their customers, co-workers and partners. Users and administrators manage their unified communications through an interface similar to those they use to manage the rest of their business applications. Using the simple point-and-click interface for Personal Assistants, or the drag-and-drop visual toolkit for Personal Business Assistants, employees can easily configure assistants to use complex business rules to screen and route their calls and notify them of incoming messages. Objectworld Assistants provide call screening, call routing, find-me/follow-me, notification, all depending on who called and the time-of-day/day-of-week.

UC Server works with a wide range of SIP telephones, gateways and other products and services backed by Objectworld second-level support. Connect-certified products and services deliver greater choice, lower costs, and the peace of mind that comes with Objectworld second-level support. UC Server is compatible with SIP phones and gateways from a number of leading vendors. If you have an existing investment in legacy business communications systems (PBXs and key systems), UC Server lets you leverage your existing investment and transition from legacy telephony to IT Telephony at your own pace. With its multi-PBX support, UC Server can provide all its unified communications features both natively on UC Server and on your legacy PBX. And, using UC Server's routing and unified.

Deliver an end-to-end unified communications solutions for your company and customers. Lowers total cost of ownership and enhances productivity by linking business communications with business processes.
